39. After uploading project folder by using "filezilla", where it would be located. Write the command to move the project folder to public html.

Answer: After uploading the project folder by using fileZilla, the project folder would be located at

Home directory. More specifically it would locate at   /home/user_name/project_folder_name.

Example : /home/Nasir/Home_Finder.

The command to move project folder to public html :

sudo mv   source   destination

sudo   mv   /home/user_name/project_folder_name   var/www/html

Example:

sudo mv   /home/Nasir/Home_Finder   var/www/html
